I. Project Title

Watt Tracker: Electricity Bill Calculator

II. Problem Statement

Many households struggle with knowing their electricity bill before it actually arrives. Electrical companies also use kilowatt-hour (kWh) which can be hard to compute manually. They also add tax and service charges which can be hard to apply by hand.

III. Project Objectives

1. Calculate total cost of electricity based on kWh and rate given.
2. Apply a fixed fee and tax percentage to the total
3. Give an easy to understand result and summary quickly

IV. Planned Features

1. Cost Calculation
2. Extra Fee Addition
3. Bill Breakdown

V. Planned Inputs and Outputs

Inputs:

- Usage (kWh) (integer)
- Cost per kWh (integer)
- Fixed Fee (integer)
- Tax Percentage (integer)

Outputs:

- Electricity Cost
- Tax Cost
- Total Cost with Tax and Fixed Fee

VI. Logic Plan

START

Display "Watt Tracker"

Ask user for kWh_usage

Ask user for rate_per_kWh

Ask user for service_fee

Ask user for tax_percentage

Computer Science 2

Coding in a Connected World: Development of Computational Thinking Skills

QUARTER 1

```
electricity_cost = kWh_usage * rate_per_kWh  
tax_cost = electricity_cost * tax_percentage  
total_cost_withfee = tax_cost + service_fee
```

```
Display Your electricity costs: electricity_cost
```

```
Display Your tax costs: tax_cost
```

```
Display Your total costs: total_cost_withfee
```

```
STOP
```
